

What is locoregionalhyperthermia?

Hyperthermia as a medical treatmentefers to heating the bodyor part of the bodyto higher than typical

Last updated: May 2021

Is it safe?

LRHT is generally safe and well tolerated when administered with an approved device by a qualified healthcare provider or technician. There are times when LRHT may not be safe, including patients with:

- Implanted medical devices
- Inability to feel or respond to pain
- Severe lung or heart disease
- Fever
- Organ transplant
- Recent surgery
- Poor circulation in the area
- Previous radiation to the area

You should discuss the safety of the treatment with your healthcare providateam
